

NEW

# Ultra High Definition (UHD) Laparoscopes

## Rigid Endoscopes

Upgrade your OR to our next generation of clinical visualization. CONMED's NEW third generation Ultra-High Definition Laparoscopes have features designed to enhance image clarity and sharpness for improved viewing of anatomical structures.

## Features and Benefits

### Better Image Quality

The precision optics and lens craftsmanship work in conjunction with CONMED's IM8000 True HD 3MOS Camera System's procedure settings to optimize the quality of the image on the screen.

### More Consistent Clarity and Brightness

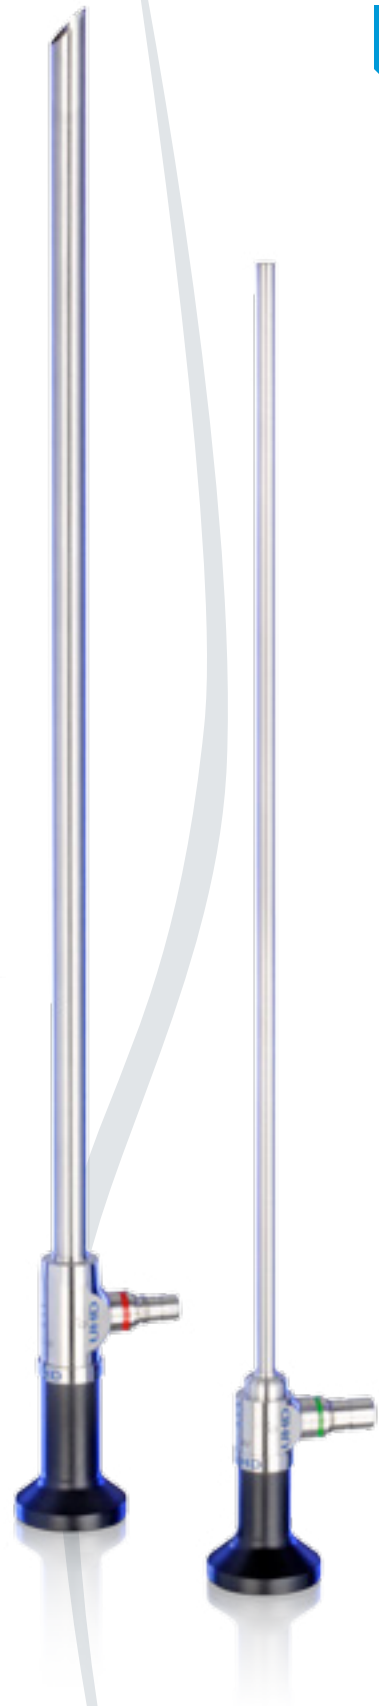

Improvements in light transmission and vignetting allow for more consistency in clarity and brightness from the center of the image, all the way to perimeter.

### Realistic Representation

Improved resolution and depth of field brings attention to critical details in anatomical structures and provides a realistic perception of the working cavity.

*Combined with CONMED's IM8000 True HD 3MOS Camera System, LS8000 Direct LED Light Source and LED Monitors, UHD Laparoscopes deliver a clear, crisp surgical image that's designed to help surgeons see better.*
