

BioMed Technical Training

Overview:

Understanding, maintaining, and servicing electrocautery generators are critical skills for biomedical engineers. By learning key concepts of electrocautery biophysics and technology, healthcare facilities are able to avoid costly service repairs and unnecessary machine down-time.

That is why CONMED is proud to offer a 3-day training seminar where participants learn about electrocautery, the mechanics and design theories behind our generators, and maintenance and servicing procedures from the actual designing engineers.

An important (and favorite) component of this training is the hands-on instruction sessions. During these times, various generators will be available for participants to examine electrical circuits, practice troubleshooting techniques, and perform basic maintenance procedures.

Training class sizes:

In order for our staff to properly train in a timely manner, the max participants per training session are 8.

Cost:

Cost per session: \$4,995 for 1 system only | Additional System: \$2,000

Registration & Contact Info:

BioMed training is available upon request only and on a first-come, first-serve basis. To request training, please reach out to our Technical Product Support team via email or phone:

Phone: 866-4CONMED (426-6633), option 3.
Option 2 for our General Surgery Tech Product Support team

Email: TechProductSupport@CONMED.com
