Loss Prevention Design

During retraction, the Nakao Spider-Net™ delicately pouches around the specimen to ensure safe retrieval and reduce the risk of specimen loss.

Specimen-friendly Function

The atraumatic net configuration, along with the specimen protection collar, minimizes the potential for minced or crushed specimen.

Specimen protection collar along with the tethered net reduces risk of specimen damage

The Competitive Advantage is Clear

Greater Visibility When Wet

When wet, net material becomes translucent for enhanced endoscopic visibility.

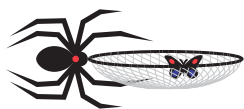

Optimal Visualization

Single-weaved, clear, nylon netting material and wider spacing allows for optimal visualization of the specimen as it is being retrieved.
